PREFACE

As explained on p. 3 of the Commentary forming Vol. II of this publication, the arduous labour involved in preparing the present Translation has rested upon the shoulders of Mr. R. O. Faulkner. If, nevertheless, Vol. III, like its two predecessors, appears under my name, it is because Faulkner has throughout followed my instructions as regards the renderings of technical phrases and formulae, and has consistently accepted my decisions on the English forms to be given to proper names. So stereotyped is the document in its modes of expression that the above-mentioned points pretty well exhaust the possibilities of independent judgement. Consequently it is I, and I alone, who bear the responsibility, and it was imperative that the title-page of this volume should reflect that state of affairs. However, the fact that Faulkner should have been willing to accept so mechanical a part only increases the debt that I owe to him; thereby he has saved me weeks of drudgery, and a last-minute revision in front of the original has shown how implicitly his care and accuracy can be trusted. Nor will Faulkner's services in connexion with the Wilbour Papyrus have ended here, since he has nobly consented to compile the volume of Indexes necessary to round off our common task. I can only hope that the above explanations will secure to him on the part of other Egyptologists the gratitude that is felt by myself.

It has not been thought desirable to encumber the footnotes here with references to the Commentary volume except in particularly interesting cases. For all questions relating to the headings and sub-headings of paragraphs the Synopses in that volume must be consulted. In comparing the Translation with the Plates of Transcription, the student should not omit to consult the Additions and Corrections on Pl. 73 (A) of the Plate volume, as well as those at the end of the Commentary and again at the end of the present volume.

NOTE ON THE RENDERING OF EGYPTIAN PROPER NAMES

THE translation of the Wilbour papyrus has involved the giving of pronounceable English forms to many hundreds of Egyptian Proper Names, and it is needful here to give some account of the considerations—they barely deserve to be termed principles—which have actuated the adoption of the particular forms that have been chosen. It has often been explained that the true contemporary pronunciations are unobtainable, partly because the Egyptians wrote their vowels only to a very limited extent, if at all, and partly because even the consonants had frequently undergone changes and, indeed, in some cases, e.g. final *t* and *r*, had disappeared altogether. Babylonian cuneiform has preserved a few names in forms no doubt approximating to those spoken and heard in Ramesside times; but they are too rare to set a standard. The spellings offered by the Greeks by no means always permit their originals to be recognized, and to adapt such spellings to our purpose would have demanded a degree of knowledge which perhaps no living scholar possesses. The only practical alternative is to give deliberately conventional renderings, though without neglecting, except on sufficient grounds, well-established and incontestable philological facts.

A certain difference of treatment is desirable for Place Names and for Personal Names, and in the Commentary, p. 29, I have set forth my reasons for translating a number of the former instead of merely transliterating them. When for one reason or another the latter course has been followed, hyphens have been freely used (e.g. N-nūhe-n-she, A 78, 24), since where topographical interest is involved it is clearly useful to exhibit the etymologies, if this can be concisely and conveniently done. No such reason could be urged in connexion with personal names and here hyphens have been avoided; in English we do not write Arrow-smith and Wood-house, but Arrowsmith and Woodhouse.

Ramesside personal names may be divided into two distinct categories: (1) those written in Middle Egyptian fashion and as a rule betraying their etymologies; (2) those written in the way which is often described as Syllabic writing, but to which I have given the less compromising title of Group-writing. The latter problem is admirably dealt with by W. F. Edgerton in *Journ. Am. Or. Soc.*, LX, 473 ff., where he rejects the theory of Albright (*The Vocalization of the Egyptian Syllabic Orthography*, New Haven, 1934) that this type of writing gave expression to the vowels. The main, perhaps even the sole, objection I have to Edgerton's views is that he underrates the preference undoubtedly shown for Group-writing in the rendering of foreign words or those of which the etymology was obscure.

(1) Prominent among the former class are theophorous personal names, and here the Greek equivalents demand that the name of the deity should be shown in unaccented form when it forms the first element of a compound name, but in accented form when it occupies a position at the end. Hence we must write Amenḥotpe, Raʿmosĕ, Menṯiwenmaf, but Penamūn, Shererēʿ, and Nakhtmont. For the other elements in these six names, experts will note that vaguely copticizing forms have been preferred, i.e. forms which take some account of etymology and grammatical structure; hence *-ḥotpe* as Old Perfective of a triliteral verb, *-ḥi-* instead of *-ḥer-* for the preposition meaning 'upon'. Readers should be under no illusions, however, as to the strict exactitude of such preferences; for instance, Babylonian cuneiform might have counselled the writing *-ḥatpi* rather than *-ḥotpe*; on the other hand, my *-mosĕ* is superior to *-mōsi* which the Greek *Ἄμωσις* might seem to dictate, since it is now well known that the Greeks often rendered short Egyptian *ŏ* by *ōmega*, and Coptic has the short vowel in the Qualitative. Some of the forms adopted may be less inconsistent than might be judged at a first glance; thus I write ʿOsēt, but ʿApaḥte, since the former is presumed to have contained the adjective *ꜥꜣ* in its absolute, predicative form ('Great is Sēt'), but the latter to have used it in its construct state ('Great of Strength'). Whether this argumentation is sound is beside the point, this being that my choices have seldom been completely unmotivated. At the end of names it seemed unjustifiable to retain the feminine ending *-t* or those consonants which are known to have disappeared in Late Egyptian; thus Usiḥē is given for *Wsr-ḥꜣt*, Neferḥo for *Nfr-ḥr*, Raʿmessenebnūfe for *Rʿmssw-nb-nfr*. A new departure is the omission of the feminine ending *-t* in the first element of compound names, thus Ḥenwʿōte for *Ḥnwt-wrtt*; Ḥashepsōwe for the name usually reproduced as Hatshepsut; for this innovation, upon which the Coptic evidence is decisive, see *JEA*. XXVII, 44, n. 1. In one detail I have deliberately ignored an ascertained pronunciation: the prefixed *Pn* (*pꜣ-n*) 'he of' was in all probability reduced to *Pa-* in Late Egyptian pronunciation, but to have rendered *Pn-tꜣ-wrt* as Patwēre would have puzzled many students, and accordingly the compromise Pentwēre has been adopted. Strictly indefensible, no doubt, are the vowels I have employed, though here too, so far as was feasible, Coptic has been the guide. The counsel given to beginners in *Egyptian Grammar*, § 19, to pronounce with *e* everywhere except beside *ꜣ* and *ꜥ* is probably the wisest course for purely philological purposes, but would give to a translation an intolerably anaemic appearance. Since we cannot hope to be altogether right in our pronounceable equivalents, surely it is better to be pleasantly, rather than unpleasantly, wrong.

(2) With those names for which the Egyptian scribe has employed Group-writing a principle has been followed to which I attach great importance. A truly scientific translation such as is here in view will often be used apart from the hieroglyphic transcription or the hieratic original, and it seems highly desirable to enable students with a knowledge of the written language to form a shrewd notion of what stood in the original papyrus. One single personal name may serve as an example. It is certain

ar. 'aroura'. This abbreviation is used only with the numerals 1, 2, 3, and 4 when the original shows the kind of ligature discussed in the Additions and Corrections in the Commentary, pp. 211 f.

Comm. The Commentary, Vol. II of this publication.

mc. 'measures of corn': a non-committal rendering of the sign for a certain measure of capacity, the identity of which has been disputed. See the Commentary, pp. 60 ff.

T 'Taken': presumed meaning of an abbreviated word sometimes placed in front of the lines of measurement. See the Commentary, p. 71.

Words written in red in the original are printed in SMALL CAPITALS. Note, however, that in some cases where English translation involves the inversion of two Egyptian words, the second of these may be rendered in SMALL CAPITALS, though written in black in the original. For example, in the sub-heading of § 4 we print 'REGULAR DOMAIN', not 'Regular DOMAIN'; so, too, in the heading of § 6 black *pš* is shown as 'APPORTIONED'.

Numbers written in red in the original are printed in *italics*.

| between two words of the translation marks the transition to another line in the original. So far as possible every line in the printed translation represents a separate line of the original.

Square brackets [ ] are used to contain words or parts of words in lacuna in the original.

Pointed brackets $< >$ are employed for words erroneously omitted by the scribe.

Round brackets ( ) are used for words omitted in the Egyptian, but added in the translation to make the meaning clearer.

Diacritical signs written in red in Text B are provided with an underline, since they can be written neither in small capitals nor in italics.

that the combination  in Group-writing represented *l*, but that sound was sometimes shown as . The group incorporates a biliteral sign reading *ḫw*, and to retain the colouring of *w* by rendering with the vowel *u* seems a practical convention. On the other hand, Albright believes that was regularly employed for *ḫa*, and consequently a scholar who accepts his view might well represent the female proper name by Ḥal. For my part, I adhere to Ḥunero, from which any reasonably advanced student can at once reconstruct the spelling of the original. If someone should object that the determinative of , in the place-name which I render 'the New land of Bunero' points unmistakably to the pronunciation Bal (cf. Coptic ⲃⲁⲗ 'eye') I do not deny this contention, but reply that for most students it is more important to know what stands in the original than to be empowered to pronounce the word as the Egyptians did; also that it would be precarious to argue from this Bal to the supposed Ḥal, and that it is desirable to adhere strictly to a principle when once adopted.

There is one apparent inconsistency in connexion with which, if I do not incur actual censure, I shall scarcely escape ironic amusement. For the name written *Mr-n-Ptḥ* I write Meneptaḥ when the Nineteenth Dynasty King is meant, and Merenptaḥ when the reference is to one of the four private persons bearing this name in Text A. It is, indeed, an unfortunate accident which has brought about this situation, but it has arisen, not from careless disregard of consistency, but from a close regard of it. In common with other scholars it has been my practice to use Manethonian or classical names for the Pharaohs (e.g. Ramesses, Sesostris, Cheops), since these have at least some degree of authority behind them. In a few cases where it has been impossible to retain the precise traditional form, some approximation to this has appeared requisite; thus in the Additions and Corrections to my *Ancient Egyptian Onomastica* I have asserted my preference for Meneptaḥ on the ground of Manetho's Ἀμενέφθης, and I might have added that the same form is vouched for by the Hebrew עין מי נפתוח of Jos. 15, 9; 18, 15 so ingeniously interpreted as 'Well of Meneptaḥ' by Calice, *OLZ*, 1903, 224. On the other hand, Merenptaḥ is imposed as the name of lesser personages by the analogy of such names in Pap. Wilbour as Meremopĕ (A 45, 6, &c.), Meremimu (A 77, 22). The inconsistency between Meneptaḥ and Merenptaḥ has thus resulted from faithful adherence to principles which at this point have unfortunately intersected and clashed. I cannot help recalling my friend Winlock's witty taunt that our philological habits would involve our calling one and the same Egyptian celebrity Amenemḥēt whilst he was still only vizier, but Ammenemes I from the time when he seized the throne. Alas, it is so, but this again is an unavoidable accident.

In conclusion, let it be said that universal approval is not expected for the line taken in this matter. The question is more one of taste and practicality than of knowledge and scholarship, and in such circumstances each translator may well have his own views. All that can reasonably be asked of him is that, once a particular form has been chosen, it should be adhered to. Every endeavour has been made by R. O. Faulkner, upon whose shoulders has fallen the actual burden of translation, but who has used my indexes for the purpose, to see that each proper name should be rendered in the same fashion throughout.

[1] 'His' here refers to the Steward Usima‹rē‹nakhte of 1, 2.
[2] See above, p. 113, n. 3.
[3] Here in red the diacritical sign ⸗, for which see Comm. p. 185.
[4] It is not certain whether this and what follows belongs to page 8 or to page 9.
[5] The whole of this line in red has been subsequently squeezed in between 8, 6 and 8, 8.
[6] On this note see Comm. p. 187.
[7] Though this red comment is numbered 8, 17 A in the photographic Plate, I am now inclined to believe that it belongs to 8, 18.
[8] An obscure diacritical mark in red precedes this line, which was an afterthought squeezed in by the later hand.

[1] The following words are separated from the foregoing by a sort of bracket, the purpose of which is not clear. The sign transcribed as ⟨⟩, i.e. 'Total' in the Plate of transcription, is perhaps rather a clumsily made ⟨⟩, cf. 8, 6 above and the note thereon. A total here would be quite out of place, since no new paragraph begins in 9, 1.

[2] The dash and following small sign stand for 'ditto', i.e. the Chief of *thr*-warriors Ḳenḥikhopshef mentioned in 9, 6.

[3] 'His' here refers to the Steward Usimaʿrēʿnakhte of 1, 2.

9, 30 THE SHER[DEN] . . . . . [RAᶜMES]SENAKHTE *10* . . . . . *9*, TOTAL *29*, MAKING AROURAS *1*[*4*]

Owing to the confusion of the entries at the top of p. 10, enhanced by a large lacuna dividing the right-hand from the left-hand portion, a description is here substituted for the usual simple rendering into English words and figures. In l. 1 the word for 'TOTAL', *preceded by a black diacritical mark, doubtless emanates from the original scribe, but the later written figures contained in the large loop close to this word, no less than those seen much farther to the left, give numbers far too high to be the total merely of* § 6. *Within the loop we read:*

ARABLE LAND, AROURAS *553*, MAKING AROURAS *276½*
1065 (or *1165*??)[1]

Above the loop is a broken number 200 + . . . In a line with the word TOTAL, *but farther to the left, is written in red . . . . .* [*613*?] MAKING AROURAS *306*(?)*½*, *followed* (*much as in B5, 14; 7, 23*) *by the note* CULTIVATION (?) BY SHERDEN, ARABLE LAND, *300 + ... 11*(?)*3½*. *Above are black figures reading:*

balance 261½
balance 26(?)1½. balance 276½. balance 200 + . . .

[1] Note that the grand total of 1165 (if that figure, and not 1065, was meant) is very nearly the sum of 613 and 553. As conjectured in Comm., p. 188, here the complete area controlled by the Steward Usimaᶜrēᶜnakhte may have been given; the figures at the ends of most of the preceding paragraphs are lost or partially so.

[1] Here was a note in red, now completely illegible.
[2] Is Nin to be emended to Nin(su)? If so, 'the nome of Ninsu' would have to be substituted for 'P-u-Nin'. 'On fields of . . . . .' is here exceptionally omitted.
[3] Before the total is a red annotation perhaps signifying 'examined' followed by another sign, see Comm., p. 185.

[1] The usual formula '(on) fields of . . . . .' is absent from this red later-added line.

[2] In making up his total the scribe has overlooked the 10 arouras of fresh land in B 20, 21, probably because this line was written in red.

[3] A red diacritical 𓏏 stands before this red additional line, which is peculiar in that, so far as can be seen, there is no indication of area.

[4] On this total see Comm., p. 184, bottom.

[5] Obscure red diacritical signs before ll. 9–11, 13–17.

[6] The sign for 'BALANCE' has been mistakenly printed in black on Pl. 68 A.

[7] For this temple see Comm., p. 168, top.

[8] The total here is a typical example of the method employed, and has been used as such on p. 183 of Comm.

FINAL ADDITIONS AND CORRECTIONS

VOL. I, PLATES

Pl. 7 A. A 17, 25. That the dot in the personal name should be read as 𓐛 and not as — is shown by 36, 17. The only other examples of the dot are 27, 49; 41, 15; and it is absent in the thirteen other instances in this papyrus; see, too, Ranke, *Äg. Personennamen*, 103, 22. I have, accordingly, rendered as Pwaʿamūn throughout.

Pl. 8 A. A 18, 34, with Comm. p. 177, n. 2. The transcription in the Plate gives 𓇋𓏏[𓏏]𓏥𓊃; for the sign below 𓊃 perhaps — is not completely excluded, but 𓃀 is less improbable. To the discussions of the god Ḥaur add now that by Leibovitch in *Ann. du Service*, XLIV. 163 ff.

Pl. 10 A. A 22, 39. For 𓂝 read 𓂋, yielding the name Taroro, see Ranke, op. cit., 382, 17. Since Taro could have no etymology with 'mouth', 𓂝 would be pointless. Palaeographically, 𓂝 and 𓂋 are barely distinguishable.

Pl. 13 A. A 29, 16. My transcription has here gone sadly astray. 𓐍𓈖 is quite clear at the beginning of the line.

Pl. 28 A. A 59, 36. In place of 𓂝 probably read 𓂋, a group which, as seen already from my correction to A 22, 39, frequently causes difficulty. In various instances I have been unable to arrive at a reasoned decision, and this problem will henceforth be ignored.

Pl. 33 A. A 69, 10. The name is perhaps to be read 𓇋𓂋𓄿𓈖, a name found in 37, 1; 41, 45; 54, 30. No such name as Shefnakhte is known. However, in this case it has to be admitted that the scribe has written the first group very unintelligibly.

Pl. 54 A. B 7, 16. After 𓋴𓈖𓐍 insert 𓆑𓈖𓐍.

Pl. 55 A. B 8, 32. Near end, for 𓏏𓏏𓏏 read 𓏏𓏏𓏏.

Pl. 60 A. B 13, 29. The red addition given in the transcription above the end of 13, 30 must be moved back to the end of this line. See above in this translation volume, p. 120, n. 7.

Pl. 61 A. Interline above B 14, 5. 𓎛𓏏𓏏𓏏 ought to have been printed in black, but the cancelling stroke is red as in 14, 1 and at the end of 14, 5.

VOL. II, COMMENTARY

After p. 36, Table II. Here 𓋴𓐍𓊃𓈖𓆰 'Sycomore-Lake' (46, 2; 73, 5, 12) has been omitted by mistake. In both columns, however, it is named in connexion with Sharopĕ, and consequently belongs to Section III.

P. 70, just before the black heading **b. The actual assessments**, add as follows: It remains to draw attention to two lines of measurement, namely, 33, 21, and 83, 8, where the name of a person has been abnormally appended to the designation of the place of measurement. Both these exceptions occur in apportioning paragraphs, in the latter case introduced by *m-ḏrt*, while in the former I have rightly or wrongly restored [*ḥt*] before the title 'scribe'. The introduction here of an intrusive person's name has not prevented the name of another cultivator being given in the normal fashion in the following line. I have no explanation to offer.

Pp. 205 ff. Since my article in *JEA*, XXVII and various pages in this Commentary have aimed at giving, between them, translations of all the more important passages in known Ramesside papyri which deal with taxation, it seems desirable to include here reference to a short text about to become available, in more complete form than hitherto, in *RAD* 82–3. The collection of miscellaneous compositions to which I have given the name Turin A opens with a model letter which was very defective in the text as published in my *Late-Egyptian Miscellanies*, p. 121. After the appearance of that book Capart noticed in the Geneva Museum some fragments which turned out to belong to the papyrus in question. It is, therefore, now possible to give a full rendering of that part of the letter which followed upon the lost initial greetings:

. . . [to this] effect:—When [my letter reaches you, you shall urge on the workmen to accomplish (?) the] business of the Place of Truth (i.e. the Theban Necropolis) which Pharaoh said was to be performed, and you shall give them (their) rations out of the remainder of my corn which is in your possession. And you shall take note of the tasks which they have performed since the 29th day of the first month of the Winter season of Year 6 down to this day. And you shall enregister the corn-tax (*šm*) of the House of Amen-Rēʿ, King of the Gods, which is in the Southern Province, and you shall load it into the ships of the House of Amen-Rēʿ, King of the Gods, which are under the command of the stable-master of the Residence Paywehem. And you shall write to me about your state (of health). Fare you well.

It is only the last lines of this letter which contain any reference to taxation, and it cannot be said that they add anything of value to our knowledge. Still, there is perhaps some interest in this new testimony to activities recorded in broader detail in the Amiens Papyrus and the Turin Taxation Papyrus.

VOL. III, TRANSLATION

P. 11, n. 2. The probability that the locality here rendered P-My (?) is to be interpreted as P-yom, i.e. the Fayyūm, is enhanced by some spellings discussed in my *Ancient Egyptian Onomastica*, 1. pp. 162* f.

P. 17. A 17, 25. Whether the name of the father here is read with or with what is perhaps the more likely group , we ought probably to interpret as the dual Towĕ, not as Tata, see Ranke, 377, 7. So, too, in 52, 42; 95, 28.
